

# Use case: Does routing the right evidence change a model's answer?

**CONTEXT** Japan's capital is Tokyo. France's capital is Paris. Brazil's capital is Brasilia.

**QUESTION** What is the capital of Japan?

**TARGET EVIDENCE** Tokyo

## Distractor-focused assignment

## Evidence-focused assignment

|               |                      |                  |               |
|---------------|----------------------|------------------|---------------|
| Paris<br>0.07 | <b>Tokyo</b><br>0.55 | Brasilia<br>0.25 | other<br>0.13 |
|---------------|----------------------|------------------|---------------|

**"Tokyo" evidence mass = 0.55**

We preserve the model, prompt, values, and complete weight spectrum, and measure the paired change in target-answer margin  $\Delta M$ .
